Content:

- **Introduction: 5 points**
  - A clear and concise description of the rationale, hypotheses, and objectives of the research to be presented.

- **Methods: 10 points**
  - A clear, complete, and concise description of the experimental design and measurements taken, demonstrating sound scientific principles and techniques.

- **Results & Discussion: 15 points**
  - A clear description of the results, analyses used to interpret the results, conclusions drawn from the research conducted, and implications or limitations of the research results.

Presentation:

- **Visual aids: 9 points**
  - Quantity and quality of slides of the presentation, including appropriate tables, figures, and photos. All measurements should be reported in SI units.

- **Oration: 3 points**
  - Quality and quantity of sound delivered by the presenter. Inflections and variation in pitch and enthusiasm in delivery of content are desirable characteristics. Proper grammar and correct pronunciation and use of terminology should be employed. Physical manner includes the appearance of the speaker, movements, gestures, and poise with which the speaker presents the paper, utilizes the visual aids, and answers questions.

- **Time: 8 points**
  - Length of the presentation. Total time for paper presentations is 10 to 12 minutes, which consists of 6 to 8 minutes for the presentation and up to 4 minutes for questions from the audience. Two points will be deducted for every 30 seconds outside the 6 to 8 minute time limit.
